

Q.1. Given N array elements & Q queries on same array.

for each query calculate sum of all elements in given range $[L-R]$. Note: $L \leq R$.

ex) arr[10] = -3 6 2 4 5 2 8 -9 3 1
0 1 2 3 4 5 6 7 8 9

Q.4

L $R \rightarrow$ index

4 8 \rightarrow 9

6 9 \rightarrow 3

1 3 \rightarrow 12

0 4 \rightarrow 14.

Brute force

for every query iterate and get

sum for $[L-R]$.

for ($i=1; i \leq Q; i++$) {
 sum = 0

 for ($j=L; j \leq R; j++$) {
 sum = sum + arr[j]

} point(sum)

$\text{TC} \Rightarrow O(Q \times N)$

$\text{SC} \Rightarrow O(1)$

// Given Indian team's score, for first 10 overs of
batting after every over, current score is given below:

Overs :-	1	2	3	4	5	6	7	8	9	10
Score :-	2	8	14	29	31	49	65	79	88	97
per that over				↓						↓
				score after 4 over						score after 10 overs

// Total score gained in the last over = $S[10] - S[9]$
 $= 97 - 88$
 $= 9.$

// Total score gained in the last 5 overs = $S[10] - S[5]$
 $[6 - 10] = 97 - 31$
 $= 66,$

// Total score gained in 7th over = $S[7] - S[6]$
 $= 65 - 49 = 16.$

// Total score gained from over [3 6] = $S[6] - S[2]$
 $= 49 - 8$
 $= 41.$

// Total score gained from over [1 5] = $S[5] - 0 = 31 - 0 = 31.$
